Applications

• Working standards
• Portable transfer standards
• Supports Artifact Calibration of the Fluke 5700A and 5720A Calibrators

Features

• Small and rugged
• No oil or air baths required
• 18°C to 28°C operating range
• Supplied with temperature characterization
• Six month stability to 2.5 ppm

Fluke 742A Standard Resistors are high accuracy working standards for precision, on-site resistance calibration. Their excellent temperature stability allows them to be used from 18°C to 28°C with typically less than 2 ppm degradation. Using the calibration table supplied with the standards, which lists corrections in 0.5°C increments, this uncertainty can be reduced to near zero. No cumbersome oil or air baths are required.

Because 742A Standard Resistors are small and rugged, they are easy to transport. Care has been taken to reduce resistance changes brought about by thermal and mechanical shock. Retrace (shift in resistance) is typically less than 2 ppm after cycling between 0°C and 40°C.

The 742A-1 1Ω and 742A-10k 10 kΩ units are ideally suited for Artifact Calibration of the Fluke 5700A and 5720A Calibrators. The other values can be used to verify the calibration if you desire.

A convenient transit case, designed to hold two standards, is available as an option.

Operating temperature range: 18°C to 28°C
Storage temperature: 0°C to 40°C
Retrace error (hysteresis):
23°C to 18°C to 23°C cycle: Negligible resistance shift
23°C to 28°C to 23°C cycle: Negligible resistance shift
23°C to 0°C to 23°C cycle: <2 ppm resistance shift
23°C to 40°C to 23°C cycle: <2 ppm resistance shift
Size: 8.6 cm H x 10.5 cm W x 12.7 cm D (3.4” x 4.15” x 5”)
Weight: 1.5 lbs to 2 lbs depending on the model
