

## Instrument Security Procedures

**Model: Fluke/Hart Scientific 1521**

**Product Name: 1521 Handheld Thermometer Readout**

**Instrument Description: Handheld Thermometer Readout**

**Memory Description:** Contains EEPROM non-volatile memory for storing configuration and operational settings and calibration adjustments. Contains volatile RAM for storing real-time measurement data and measurement statistics. Measurement data is not stored in non-volatile memory.

**Memory Cleaning Instructions:** Measurement data and measurement statistics are cleared when power is switched off or disconnected. Operational settings stored in non-volatile memory cannot be erased at once but may be changed to original settings individually (refer to the User's Guide).
