This supplement contains information necessary to ensure the accuracy of the above manual.
Change #1, 361

On page 24, under MEAS?, remove:

4 = Measurement unsettled

On page 27, add the following to the VAL?, response:

Response

1. (Float) The magnitude of the measurement in volts.
2. (Float) The frequency of the measurement in Hertz.
3. (Integer) A code describing the measurement as follows. If more than one conditions is true, the highest number only is returned.
   • 0 = Measurement conditions valid, no other condition below is true
   • 1 = Frequency underrange
   • 2 = Frequency overrange
   • 3 = Measurement settled, but digital filter not full
   • 4 = Measurement is unsettled ("U" annunciator is lit)
   • 5 = Value is underrange ("LLLLLLLL" on display)
   • 6 = Value is overrange ("HHHHHHHH" on display)
   • 7 = Value is invalid ("--------" on display)
